Revyform 2h2

EXCLUSIVE BIO REGENERATIVE FORMULA

Revyform 2h2

EXCLUSIVE BIO REGENERATIVE FORMULA

Revyform®2h2 is the new sterile cosmetic based on hyaluronic acid, amino acids and **calcium hydroxyapatite**.

It is a solution containing **52 mg/2,6 mL** of **highly purified sodium hyaluronate, Glycine, Proline** and **CaHA**.

Designed for the **stimulation** and **regeneration** of the epidermis, it contains a mix of ingredients that ensure a synergy of proven effectiveness and reliability to achieve a real tissue lift.

The amino acids **Glycine** and **Proline**, in association with **Hyaluronic Acid** and **Calcium Hydroxyapatite**, are useful for the formation of new collagen, since fibroblasts require, with advancing age, an increasing amount of amino acids.

The formula guarantees, with just a few treatments, to increase **tone, elasticity** and **radiance**.

It can be used as an adjuvant to improve the appearance of **wrinkles, hydration** and **firmness of the skin**.

USAGE PROTOCOL

- **Transdermal delivery:** the facial or body treatment used for skin rejuvenation and other skin imperfections.
- **Derma roller:** used to give a younger skin, to fight blemishes, but above all to treat acne scars or thickened skin.
- **Other Topical Treatments.**

4 treatments, one every 7/10 days for three months.

OF HYALURONIC ACID

 PERFECT
STIMULATING AND
REGENERATING MIX

WHO IT IS AIMED FOR:

This treatment is indicated for men and women of any age, who have suffered the effects of stress, sudden weight loss, fatigue and advanced age.

HOW THE TREATMENT WORKS:

After a careful study of the facial skin, treatments are carried out aimed at:

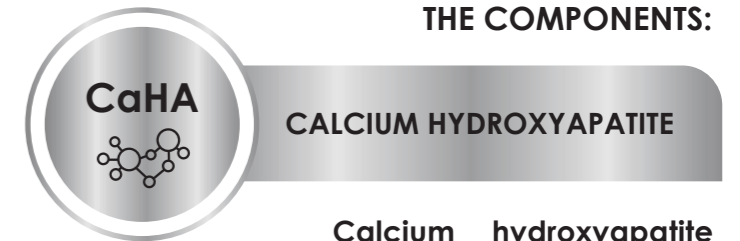

1. **Smoothing out wrinkles.**
2. **Improve skin quality and radiance**
3. **Increase firmness and compactness.**

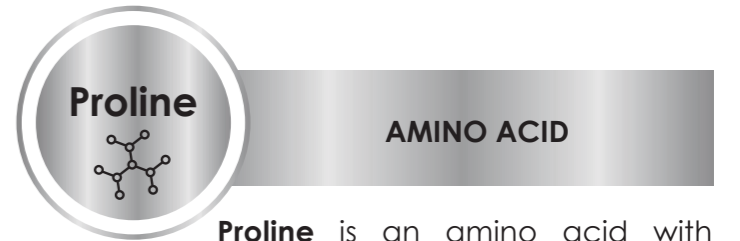

Hyaluronic Acid, present in the formula, is highly purified. It derives from a particular non-pathogenic probiotic bacterium used in food fermentation and of plant origin. It helps to regenerate and moisturize the skin on the surface.

Glycine performs multiple actions in our body: the most important is to restart the mitochondrial function of senescent fibroblasts, which, by producing new energy, resume the activity of protein synthesis, and therefore also of collagen, whose main component, over 30%, is also made up of glycine itself.

Calcium hydroxyapatite microspheres stimulate fibroblasts more in the production of new collagen, making the degradation of hyaluronic acid itself more gradual.

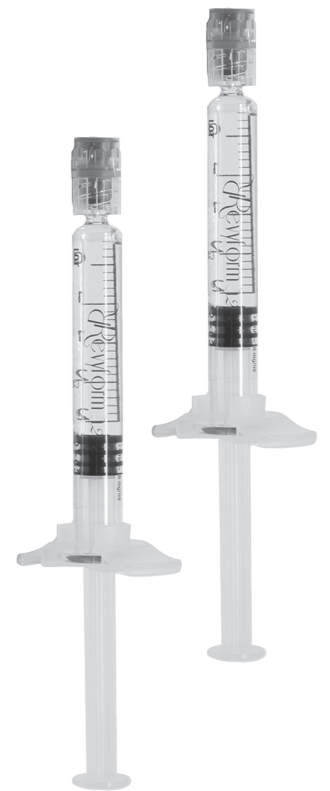

Proline is an amino acid with several beneficial properties including, in particular, the strengthening of connective tissue and the well-being of the skin.

INCI: Aqua, Sodium Hyaluronate, Calcium Hydroxyapatite, Glycine, Proline, Disodium Phosphate, Sodium Phosphate.

Cosmetic product for external use only

*Product supplied in syringe for better use of the cosmetic

The package contains:
2 pre-filled syringes of 2.6 mL e each.

**+ TONICITY + BRIGHTNESS + COMPACTNESS
IN A FEW TREATMENTS**
